

## WEEKLY HARVEST REPORT – September 19, 2025

Harvest of the 2025/26 HRS crop is almost finished, with less than 5% remaining. Rainfall has stalled progress in the northern durum growing region; under 10% of that crop is left to be harvested. Current grading for HRS is U.S. No. 1 Northern Spring (1 NS), and northern durum is graded at U.S. No. 1 Hard Amber Durum (HAD). The USDA estimates that approximately 11% of the 2026/27 winter wheat crop is planted.

## HARD RED SPRING

- **Crop Progress:** Following early harvest delays, producers have made good progress over the last couple of weeks with more favorable conditions. Harvest of the 2025/26 HRS crop is all but complete with less than 10% of the crop remaining. As of September 16, USDA pegged Montana 93% harvested and North Dakota 92%.
- **Wheat Data:** About 76% of samples have been collected and analyzed for this report. The average protein content is 14.3% (12% mb), consistent with last week, and slightly lower than the five-year average of 14.5% (12% mb). The test weight average is 61.6 lb/bu (81.0 kg/hl), which is higher than last year’s final average of 61.1 lb/bu (80.4 kg/hl). The average falling number is 415 seconds, indicating a sound crop. The average vitreous kernel content is 59%, resulting in a current crop grade of No. 1 Northern Spring (1 NS).
- **Weather:** Forecasts indicate cool temperatures with chances of precipitation.

## NORTHERN DURUM

- **Crop Progress:** According to USDA/NASS, Montana's durum harvest was 97% complete as of Monday, September 15, while North Dakota's stood at 85% completion. Harvest operations slowed due to rainfall over the past weekend and into this week. The remaining fields to be harvested are likely to have lower quality as a result of substantial rainfall during the past week.
- **Wheat Data:** A total of 83 samples are currently undergoing laboratory analysis. Protein has risen to 14.2% (12% mb), while HVAC has increased to 81%. The average falling number is higher than last week but remains below both last year’s level and the five-year average. Although total damage and defects have decreased since last week,

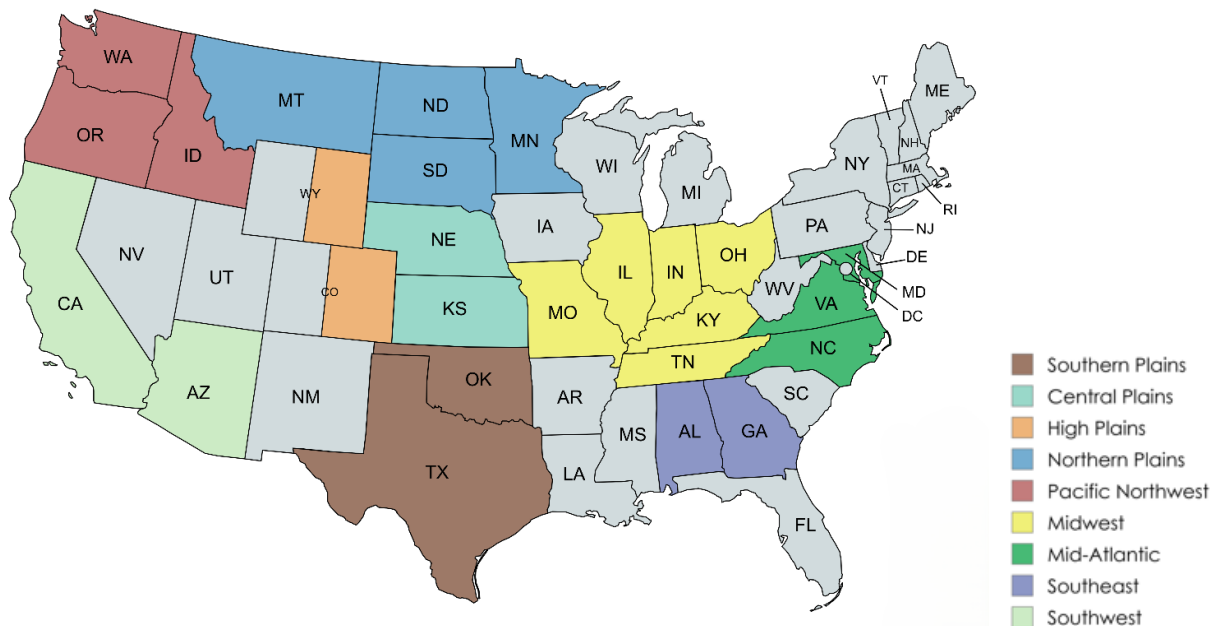

these values remain above those reported for 2024 and the five-year average. The reduction in total damage has resulted in an average grade of U.S. No. 1 Hard Amber Durum (HAD).

- **Weather:** Cool temperatures and chances for precipitation are forecast.
