

## WEEKLY HARVEST REPORT – September 26, 2025

Due to shorter days and wet conditions, harvest progress in North Dakota was limited this past week. The current grading for HRS is U.S. No. 1 Northern Spring (1 NS), and northern durum is graded at U.S. No. 1 Hard Amber Durum (HAD). According to the USDA, about 23% of the 2026/27 winter wheat crop has been planted. Next week will be the last weekly harvest report for the season.

## HARD RED SPRING

- **Crop Progress:** Shorter days and recent rain have slowed harvest, but farmers are finishing up the 2025/26 HRS crop. As of Monday, USDA estimated that North Dakota was 94% harvested, and Montana 96%.
- **Crop Conditions:** State representatives report that despite environmental challenges, yields have generally been above average. Areas of lower yields resulted from below-average precipitation, isolated storm damage and disease pressure. As data show, this is a typical HRS crop but with lower vitreous kernel content due to wet weather.
- **Wheat Data:** No new samples were tested this week because of processing delays. The final weekly update will be provided next week.

Data and commentary are on the following sampled states only: MN, MT, ND, SD. Table data source: North Dakota State University, Hard Red Spring Wheat Quality Laboratory

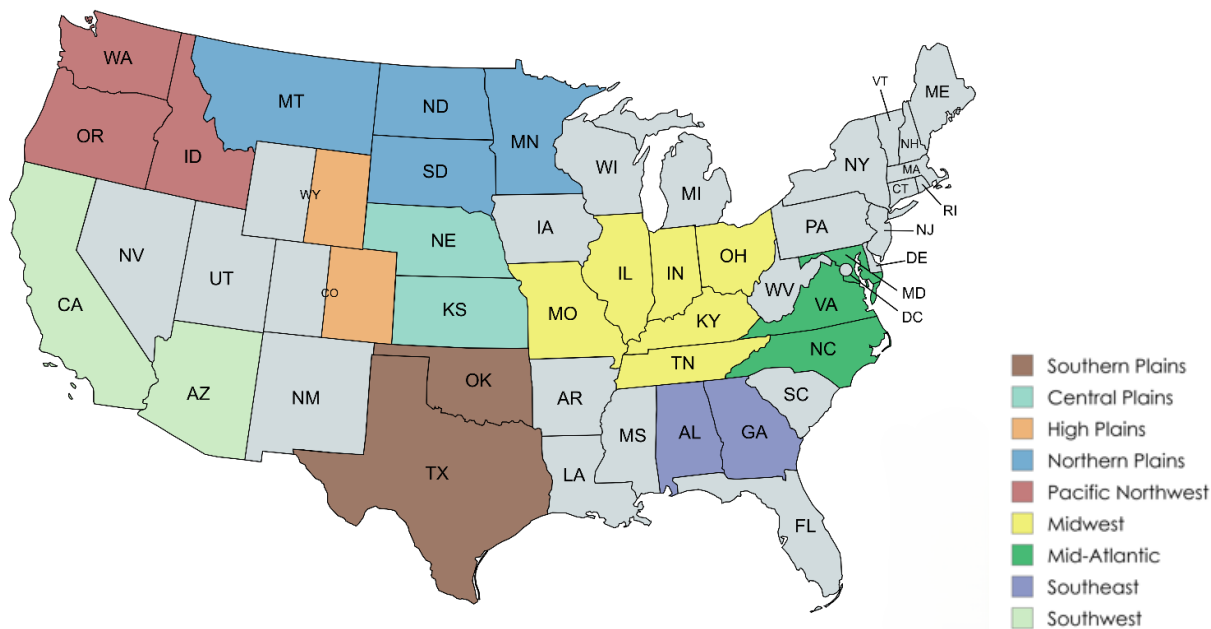

## NORTHERN DURUM

- **Crop Progress:** Like HRS, rain delays and shorter days have contributed to delayed harvesting of the remaining fields According to USDA/NASS, as of Monday, Montana’s crop is 100% harvested while North Dakota is 86% complete. Fields not yet harvested will likely have lower quality due to recent wet weather.
- **Crop Conditions:** Overall, producers are reporting mostly good yields, though quality is variable depending on harvest timing and conditions.
- **Wheat Data:** A total of 111 samples are currently undergoing laboratory analysis. Protein has increased to 14.3% (12% mb) and HVAC to 82%. The average falling number is higher than last week but remains below both last year’s level and the five-year average. Test weight, total damage and total defects are higher than last year and the five-year average. Kernel weight is greater than last year but similar to the five-year average. The overall average grade is U.S. No. 1 Hard Amber Durum (HAD).
