Durum: a range of prices are available depending upon various quality attributes and logistics.

Northern Durum offers from the Great Lakes for October/November 2024 delivery are quoted at \$8.30/bu (\$305.00/MT) as of September 20, 2024. For Desert Durum offers, contact your supplier.

Hard White: a range of prices are available depending upon various quality attributes and logistics.

Hard Red Spring: HRS price indications in this report are for a 65% DHV content out of the PNW and G.L. and a 40% DHV content out of the Gulf; for specific NS/DNS DHV premium spreads, contact your supplier.

Legend: M = Minneapolis Grain Exchange; K = Kansas City Board of Trade; C = Chicago Board of Trade;

\$ = cash price quote; N/A = quote not available; closed = Great Lakes are closed to vessels for winter; c/bu = cents per bushel;

Futures Contract Month: H = March; K = May; N = July; U = September; Z = December

NS/DNS=Northern Spring/Dark Northern Spring (subclasses of Hard Red Spring); HRW=Hard Red Winter; SRW=Soft Red Winter; SW=Soft White; WW=Western White (White Club & Soft White)

F.O.B. = "Free on board" - Seller is responsible for placing grain at the end of the loading spout. Buyer is responsible for providing the ocean vessel and for all other costs after the grain is delivered on board.

Basis: The difference between the cash price and futures month for specific quality, shipping period and geographical location.

Cash: Durum, SW and WW are quoted in dollars per bushel (\$/bu.) rather than basis for each contract month.

Convert: To compute cash price, add basis level and current futures to get price per bushel. Multiply by 36.743 to get price per metric ton.

Example: Basis = 70 and Future Price = \$9.00, the price per bushel is \$9.00 + .70 = \$9.70/bu. Price per metric ton is \$9.70 * 36.743 = \$356/MT.

All prices are based upon U.S. number two grade or better as certified by the Federal Grain Inspection Service (FGIS).

The weekly prices as reported by U.S. Wheat Associates are compiled through research from numerous market sources, including U.S. wheat exporters of all classes from various U.S. ports. The prices reported are representative of the value of number two grade and the proteins indicated. **They are not intended to represent offers nor should importers of U.S. wheat rely upon them as such. Additional factors may alter these prices significantly.**

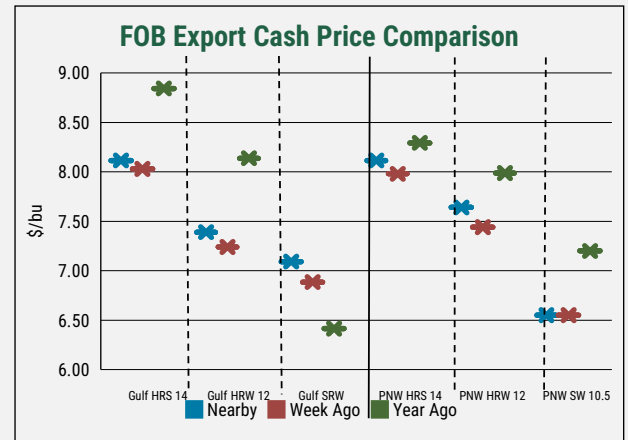

These factors may include: (1) payment terms (differing from cash against documents which are the terms used in the U.S. Wheat Associates price report); (2) various quality factors, and method of quality certification; (3) loading terms (USW prices represent Free on Board and do not include loading rate guarantees, stevedoring costs or other elevator tariff charges); (4) different delivery periods than indicated in monthly prices reported by U.S. Wheat Associates.

U.S. Wheat Associates recommends regular contact with exporters of U.S. wheat in order to receive offers representative of your requirements.

This contact will allow importers to review contract terms and better understand the U.S. grading system, role and function of the Federal Grain Inspection Service (FGIS).

Contact: For questions, please contact tyllorledford@uswheat.org

Weekly Price Report September 26, 2024

- Futures markets ended the week higher, supported by dry weather in the Black Sea, and reinforced by strength in corn and soybean markets from Midwest heat and drought in Brazil. December 2024 CBOT soft red winter wheat (SRW) futures were up 19 cents for the week, closing at \$5.84/bu. KCBT hard red winter wheat (HRW) futures were up 15 cents at \$5.79/bu. MGEX hard red spring wheat (HRS) futures were up 4 cents at \$6.11/bu. In other commodities, CBOT corn futures were up 8 cents for the week at \$4.13/bu. CBOT January soybean futures were up 28 cents at \$10.59/bu.
- Basis levels ended steady to higher this week. Wheat demand was low and attention has shifted to soybean and corn export programs, putting excess pressure on elevator capacity and logistics.
- For the week ending September 19, traders reported net sales of 158,900 metric tons (MT) for delivery in 2024/25, falling short of trade estimates of 200,000 to 600,000 MT. Total outstanding sales and accumulated exports of all wheat classes for the 2024/25 marketing year have reached 11.2 million metric tons (MMT), which is 22% ahead of last year's pace. The USDA projects U.S. wheat exports for 2024/25 to be 22.5 MMT, with current commitments accounting for 50% of the total projected exports.
- The September 23 [Crop Progress Report](#) shows that the spring wheat harvest is winding down with 96% in the bin. Winter wheat planting has advanced by 11 points to reach 25%, on pace with the five-year average. Winter wheat emergence sits at 4%.
- On September 30, USDA will publish its [Grain Stocks](#) estimates, showing ending stocks for corn and soybeans for 2023-24, in addition to the 2024 [Small Grains Summary](#), which will focus on final U.S. wheat production estimates.
- Rain swept through much of the Plains, breaking daily precipitation records in the key states of Montana and Kansas. The Upper Midwest experienced temperatures up to 15 degrees above normal, and despite the recent precipitation, elevated temperatures persisted across the Plains. Meanwhile, the Pacific Northwest remained dry.
- Workers at Vancouver's six primary grain terminals went on strike Sept. 24 after the Grain Workers Union and the Vancouver Terminal Elevators' Association reached a deadlock over benefits. This strike may impact the export of wheat, canola, and other crops.
- SovEcon reports that poor weather in key growing regions has reduced Russian winter grains planting to just 8.3 million hectares (20.5 million acres), down from 9.3 million hectares (22.9 million acres) last year, marking the lowest level since 2013.
- Dry weather and low rainfall have led the Grain Industry Association of Western Australia to decrease the region's output by 7% to 9.3 MMT. [Severe frosts](#) on nearly mature wheat in New South Wales may also negatively impact yields. In some areas, temperatures fell to as low as -2°C (28°F). The September World Agricultural Supply and Demand estimates (WASDE) put Australian wheat output at 32.0 MMT, a 23% increase on the year.
- A recent update from the Buenos Aires Grains Exchange put Argentinian wheat production at 20.4 MMT, up from 14.5 MMT last year. The September WASDE had Argentinian production at 18 MMT, 2.2 MMT bump from the year prior.
- The Baltic Dry Index (BDI), reflecting the average cost of transporting raw bulk materials like grains, coal, and iron ore, closed the week higher at 2,091. The Northern Hemisphere soybean harvest and recent Chinese stimulus are bolstering markets. Though the International Longshoremen's Association plans to strike on September 30, it is unlikely to affect bulk freight markets.
- The U.S. dollar index ended the week steady at 100.6. After the surprisingly large rate cut at the Federal Reserve policy meeting, traders now see a 59% chance of a 50-basis point cut at the Fed's November 7 meeting, up from 37% last week, and a 41% chance of a 25-basis point cut. Additionally, U.S. consumer confidence fell in September due to rising labor market concerns.
