Durum: a range of prices are available depending upon various quality attributes and logistics.

Northern Durum offers from the Great Lakes for August 2023 delivery are quoted at \$13.28/bu (\$488.00/MT). For Desert Durum offers, contact your supplier.

Hard White: a range of prices are available depending upon various quality attributes and logistics.

Hard Red Spring: HRS price indications in this report are for a 65% DHV content out of the PNW and G.L. and a 40% DHV content out of the Gulf; for specific NS/DNS DHV premium spreads, contact your supplier.

Legend: M = Minneapolis Grain Exchange; K = Kansas City Board of Trade; C = Chicago Board of Trade;
 \$ = cash price quote; N/A = quote not available; closed = Great Lakes are closed to vessels for winter; c/bu = cents per bushel;
 Futures Contract Month: H = March; K = May; N = July; U = September; Z = December
 NS/DNS=Northern Spring/Dark Northern Spring (subclasses of Hard Red Spring); HRW=Hard Red Winter; SRW=Soft Red Winter; SW=Soft White; WW=Western White (White Club & Soft White)
 F.O.B. = "Free on board" - Seller is responsible for placing grain at the end of the loading spout. Buyer is responsible for providing the ocean vessel and for all other costs after the grain is delivered on board.
 Basis: The difference between the cash price and futures month for specific quality, shipping period and geographical location.

Cash: Durum, SW and WW are quoted in dollars per bushel (\$/bu.) rather than basis for each contract month.

Convert: To compute cash price, add basis level and current futures to get price per bushel. Multiply by 36.743 to get price per metric ton.
 Example: Basis = 70 and Future Price = \$9.00, the price per bushel is \$9.00 + .70 = \$9.70/bu. Price per metric ton is \$9.70 * 36.743 = \$356/MT.

All prices are based upon U.S. number two grade or better as certified by the Federal Grain Inspection Service (FGIS).

The weekly prices as reported by U.S. Wheat Associates are compiled through research from numerous market sources, including U.S. wheat exporters of all classes from various U.S. ports. The prices reported are representative of the value of number two grade and the proteins indicated. **They are not intended to represent offers nor should importers of U.S. wheat rely upon them as such. Additional factors may alter these prices significantly.** These factors may include: (1) payment terms (differing from cash against documents which are the terms used in the U.S. Wheat Associates price report); (2) various quality factors, and method of quality certification; (3) loading terms (USW prices represent Free on Board and do not include loading rate guarantees, stevedoring costs or other elevator tariff charges); (4) different delivery periods than indicated in monthly prices reported by U. S. Wheat Associates. U.S. Wheat Associates recommends regular contact with exporters of U.S. wheat in order to receive offers representative of your requirements. This contact will allow importers to review contract terms and better understand the U.S. grading system, role and function of the Federal Grain Inspection Service (FGIS).
Contact: For questions, please contact tyllorledford@uswheat.org

Weekly Price Report August 11, 2023

- Wheat futures traded in a narrow range for the week. Despite continued fighting in the Black Sea, the risk premium in wheat futures did not spike as it had in previous weeks. September 2023 CBOT soft red winter (SRW) futures were down 6 cents on the week, closing at \$6.27/bu. KCBT HRW futures were up 3 cents, at \$7.56/bu. HRS futures were down 7 cents at \$8.15/bu. CBOT corn futures were down 10 cents at \$4.75/bu. CBOT soybean futures were down 43 cents, at \$14.01/bu.
- Basis levels were mixed this week. The Gulf basis strengthened for HRS, HRW, and SRW, leveling off from the downward trend observed over the last few months. Winter wheat harvest progress lessened harvest-related pressure on basis values. Great Lakes HRS basis decreased as exporters position themselves for potential business. In the Pacific Northwest (PNW), the HRS basis increased, and an uptick in export demand from the PNW helped provide some support. PNW HRW basis continues to decrease, reflecting the large Montana HRW yields and need for demand. SW prices fell following the trend in SRW and pressure from the harvest in the PNW.
- The USDA [crop progress report](#) put the winter wheat harvest at 87% complete, up 7 points from last week and nearly even with the 5-year average. Untimely showers [delayed](#) the HRW harvest in many areas earlier this summer. Spring wheat conditions were relatively steady, with 41% good to excellent, down 1 point from the week prior. Spring wheat rated fair was 39%, and 20% came in as poor to very poor. USDA estimates the share of spring wheat harvested at 11%, up 9 points from the week prior and 3 points below the five-year average. Read more about the current wheat harvest progress and crop conditions [here](#).
- The August [World Agricultural Supply and Demand Estimates](#) (WASDE) put world wheat production at 793.4 MMT, down 3.3 MMT from last month but still 3.4 MMT above last year. World wheat consumption decreased by 3.4 MMT on the month to 796.1 MMT, still outpacing production by 2.7 MMT. Global exports are down 1% from July to 209.4 MMT, and world ending stocks less China were up 1.3 MMT to 103.7 MMT. Domestically, USDA decreased U.S. exports by 3% to 19.05 MMT and increased U.S. ending stocks by 4% to 16.7 MMT.
- For the week ending August 3, 2023, net U.S. commercial wheat sales of 567,600 metric tons (MT) were reported for delivery in 2023/24, above trade expectations of 200,000 to 500,000 MT and a high for the marketing year. Year-to-date 2023/24 commercial sales total 6.4 million metric tons (MMT). USDA expects 2023/24 U.S. wheat exports of 19.73 MMT, and commitments to date are 32% of total projected exports.
- Drought conditions continue to improve across the Southern Plains, with improvements in the drought monitor noted for parts of Nebraska, Kansas, and North and South Dakota; however, eastern North Dakota remains dry. Dry conditions intensified in northern Montana; otherwise, the PNW was little changed.
- Tensions continue to escalate in the Black as Ukrainian drones struck a Russian navy base near the Black Sea port of Novorossiysk on August 4.
- Russian wheat prices have hit an unofficial "price floor" of \$250/MT, with Russian offers for a recent Egyptian General Authority for Supply Commodities tender coming in higher at \$262/MT FOB.
- As Indian wheat prices increase to a [six-month high](#), the government plans to release 5.0 MMT of wheat from stocks to bulk consumers to reduce food prices. As prices remain, elevated Indian government officials have considered reducing or abolishing the 40% import tax on wheat and lowering the limit for wheat socks that millers and traders can hold.
- Dry [conditions](#) persist across the Canadian prairie provinces, [diminishing yield potential](#) for the 2023/24 wheat and durum crop. The impact on production is reflected in the August WASDE as USDA lowered Canadian production estimates by 2.0 MMT to 33.0 MMT.
- The Baltic Dry Index (BDI), which assesses the average cost of shipping raw materials such as grains, coal, and iron ore, decreased by 0.6% during the week, ending at 1,129. Markets are flat with little news to provide direction.
- The U.S. Dollar Index was slightly up this week at 102.8. The U.S. labor market remains resilient but otherwise data has reflected decelerating inflation.
